

For recreational athletes

RUNNING · CYCLING · HIKING · SWIMMING · GOLF

On the day you train alone, the stranger beside you is the first responder.

A dawn run, a weekend ride, a solo climb. When you collapse, the person beside you is not family but a passer-by. Make your information appear on their phone.

Locate	Tap	Read
The blue cross on the body	Back of a smartphone, 1 second	Blood type · allergies · medication · contacts

SCAN THE PATCH. SAVE A LIFE.

RadPatch™ · Personal Emergency Information System Patch

No battery · No internet · 1 second
26 languages · Waterproof

01 · WHAT RADPATCH IS

A patch the size of a fingernail speaks for you.

RadPatch™ is a personal emergency information system patch no bigger than a fingernail. Inside it you keep your blood type, allergies, current medication, diabetes emergency information and emergency contacts. When an accident or sudden illness leaves you unable to speak, anyone nearby holds a smartphone to the patch for one second and the information appears on the screen. No battery, no internet, no login. The information is encrypted inside the patch, not on a hospital server, and only you can change it with your PIN.

Three moves and it is done

01
Locate

Find the RadPatch on the helmet, watch strap, collar, bag or phone case. The blue cross is designed to be seen.

02
Tap

Hold the back of a smartphone (Android 8.0 or newer, or a recent iPhone) to the patch for one second. With WaveMed, or the responders' vWaveMed app, the screen opens by itself.

03
Read

Blood type, allergies, medication, diabetes emergency information and contacts appear in the reader's own language. 26 languages switch automatically, so it works abroad.

What goes inside the patch

- Name · date of birth · sex
- Blood type
- Allergies (drugs, food, insect stings)
- Current medication and doses
- Diabetes emergency information
- Emergency contacts (family, carer)
- Doctor · insurance (optional)

You choose what goes in. Only the information you want is stored.

Why a patch, not paper or an app alone

Needs no power

A passive, battery-free design. Nothing to charge, and what you store stays there until you erase it.

Survives water, sweat and the washing machine

A silicone body with a sealed chip: two layers of waterproofing. Pools, sea water, showers and the washing machine are all fine.

Readable without internet

In a mountain with no signal, a building in a blackout or a disaster zone, one smartphone is enough. If every server is down, the information is still on your body.

Your information stays yours

Stored encrypted, changed only with your four-digit PIN. Readers can only read, and other apps cannot open it.

WHY IT MATTERS · FOR RECREATIONAL ATHLETES

Sports accidents mostly happen when you are alone: a heart problem, low blood sugar, a fall, heat stroke. A passer-by calls emergency services, but nobody knows who you are, what you take, or whom to call. Your phone is locked and your wallet is in the car. RadPatch on the watch strap and kit survives sweat, rain and washing, and appears on a stranger's phone in one second.

02 · IN MOMENTS LIKE THESE

Sunday dawn, riverside cycle path

6:10	Mid-ride, sudden chest tightness and a fall. Another club rider behind stops.
6:12	He taps his phone to the blue cross on the helmet: name, angina, carries nitroglycerin, wife's number. He tells the dispatcher exactly.
6:40	Paramedics knew the cardiac history before arriving. His wife already has the hospital's name.

How it is used

Running and cycling
Helmet, watch strap, running belt. Double waterproofing against sweat and rain.

Swimming, surfing, fishing
Survives sea water and pool chlorine. Swim cap, surfboard, life jacket.

Clubs
Club-logo bands for every member. On away rides and at events, members become each other's first responders.

Hiking and trekking
Readable in the mountains with no signal. On the backpack strap and poles.

Golf, gym, tennis
Gloves, cap, bag. Older athletes' heart and blood-pressure medication stays on the body.

Where it goes

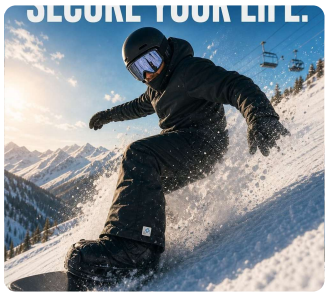

Hiking

Surfing

Kayaking

Ski · snowboard

Iron-on, hair-straightener or sticker: three ways to attach it. Watch straps, collars, helmets, bags, shoes, phone cases, even a pet collar. Attach it once and it can be read anywhere.

Two apps, both free

WaveMed — for the owner and carer
Enter your information, write it to the patch and update it with your PIN. Includes health logs, a document folder and nearby hospital search.

vWaveMed — for paramedics, emergency responders and fire crews
Used by paramedics, emergency staff, fire crews, hospitals, and also family and neighbours. Tap to read only; nothing can be changed. Shown in the reader's language.

Even in a disaster like the Nepal earthquake
When cell towers fall and the power goes out, hospital servers and the cloud are unreachable. RadPatch is read with a single rescuer's phone. A foreign rescue team sees your blood type and allergies in their own language. Where there is no communication, the information on your body is the only information there is.

03 · NO PATCH NEEDED. THE APP ALONE

Training alone, your record still in hand.

A dawn run, a weekend ride, a solo climb. Even without a patch, the WaveMed app keeps your blood pressure, blood sugar and medication logs, a satellite map, nearby care and your emergency info on one phone.

KEYWORDS FOR THIS AUDIENCE

BP & heart rate, 30-day trend · Blood sugar 30-day graph · Medication schedule · Completed · Supplement log · Satellite map · share location · Find ER & pharmacy nearby · Ride hailing · Emergency info in local language

01 Before you train

"Before a dawn ride, can you say where your blood pressure and heart rate have been heading, from a record rather than memory?"

BLOOD PRESSURE LOG · HEART RATE

Systolic and diastolic pressure draw as a 30-day trend, and every entry keeps the heart rate and a note such as "morning, seated".

"Worried about a low mid-workout? Can you show how your blood sugar moved over the last month, as a graph?"

BLOOD SUGAR LOG · 30-DAY TREND

Enter fasting and after-meal readings and a 30-day trend graph draws itself. mg/dL and mmol/L appear together, with the fasting reference table (normal, prediabetes, diabetes) on the same screen.

"Heart or blood-pressure pills: are you sure you took them before heading out this morning?"

MEDICATION SCHEDULE · COMPLETED

Name, dose, time and times per day become a dated schedule. Each dose is marked Completed as it is taken, so a missed one stands out, with reminders and calendar sync.

02 Everyday record

"The supplements you take for training: is there anywhere that says what, how much, and why?"

NUTRITION & SUPPLEMENTS

Product, dose, time of day and how many times a day, logged by date, with a 30-day trend and a PDF. Whether one clashes with a prescription can only be judged from the list.

"Before you step up your training, can you put this year's check-up numbers beside last year's?"

CHECK-UP RECORD

Keep each year's results in one place and watch how the numbers have moved. Photograph the printout the clinic gives you and it goes in beside them. No hunting through a drawer for last year's.

"If you collapse while training alone, where are your allergies, medications and emergency contacts written down?"

MY HEALTH INFO · DOCUMENTS

Blood type, allergies, medications, diabetes emergency information and emergency contacts, written down once. Scans and reports go in as photos or PDFs, ready to show the moment somebody asks.

"Hurt while training and making a claim: can you pull up the certificate and papers the moment you are asked?"

DOCUMENTS · INSURANCE

Insurance certificates, diagnosis letters and test results go into each person's document folder as photos or PDFs, so a claim never starts with gathering them all again.

03 Out on the course

“Halfway along a mountain trail or a riverside path, how do you tell anyone exactly where you are?”

MAP · SATELLITE · SHARE

Switch to satellite and the buildings and terrain are simply there. GPS holds without a signal, a map you have already looked at is kept, and coordinates and a link still send on a weak connection.

“On a route you have never ridden, can you tell how many metres away the nearest emergency room or open pharmacy is?”

MAP · FIND CARE

A 300 m radius is drawn around where you stand, and hospitals, clinics and pharmacies are found out to 2.5 km and listed nearest first, with routes and travel time.

“A club mate is hurt and needs a hospital now. How are you calling a car?”

MAP · RIDE HAILING

Drop the pin on where you are going and the app opens with the destination already filled in. Uber, Bolt, Grab, Kakao and the services people actually use in that country are added automatically, around 60 countries.

04 If you go down

“If you collapsed at a marathon or on a trek abroad, could your emergency details be read in the local language?”

EMERGENCY INFO · REPORT LANGUAGE

Change the app's language and the emergency screen and the report follow, in 26 languages. Anything chosen from a list comes out translated; notes you typed yourself stay as you wrote them.

“And in the moment you cannot speak, who tells the stranger beside you your blood type and allergies?”

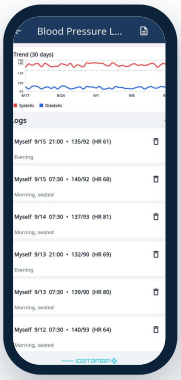

EMERGENCY INFO

The emergency screen opens without a lock: blood type, allergies, medications, diabetes emergency information and next of kin on one page. This is the point where a patch starts to matter.

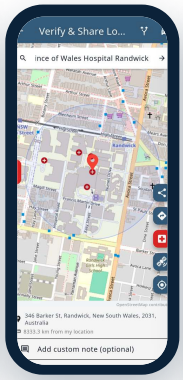

NEXT — OPTIONAL

The patch is for the moment you cannot speak for yourself.

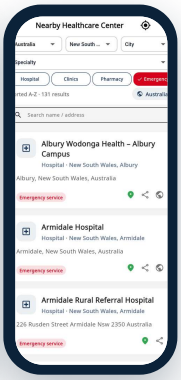

Use the app for a while and one problem is left over: who opens your record when you are unconscious, or when your phone is not with you. RadPatch solves that one thing. Whatever you put in the app today carries straight across the day you add a patch.

Blood pressure log

Map

Find hospitals

04 · ECOSYSTEM · HOW IT IS MADE

Everything connects around one patch.

RadPatch is never used alone. The owner's app, the responders' app, the desktop that organisations use for bulk registration, the ride call that gets you to hospital, the wallet-sized RadCard and the cloud all form one system around a single patch. There are 120 scenarios, and one solution.

120 scenarios, one solution — WaveMed Magazine Special Issue 03, "The Technology Solution"

WaveMed — for the general population

Enter your own and your family's emergency information, write it to the patch, and keep health logs and documents.

vWaveMed — for paramedics and emergency responders

One-second read at the scene. Read-only, nothing can be changed, shown in the reader's language.

WaveMed Desktop Intelligent Manager

Hospitals, organisations and groups register hundreds of people in list order with a reader. The centre of the hospital supply model.

Emergency Ride Call

Uber, Kakao T, Bolt, Grab and the other ride services of that country, straight to the nearest hospital.

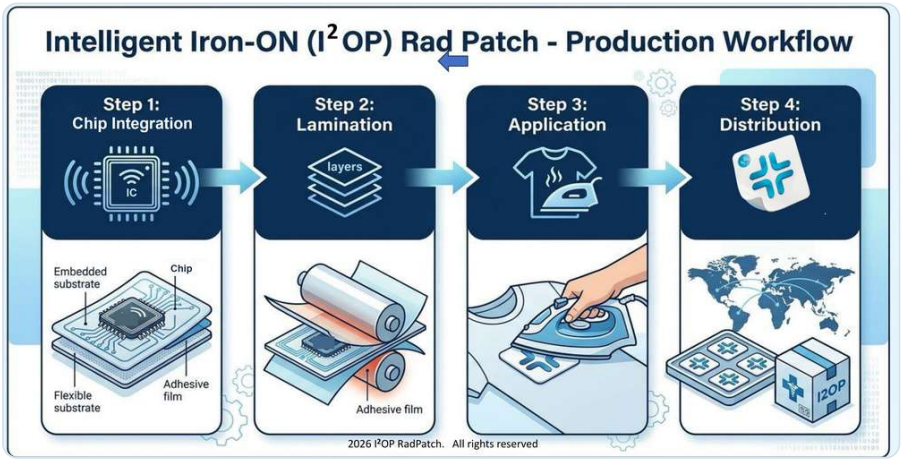

RadPatch · RadCard

A patch worn on the body and a card carried in the wallet. Same data format, so the same apps read either.

Path A · Path B

Two supply paths — Path A: individuals register with the app · Path B: organisations issue in bulk with the desktop

Intelligent Iron-ON (I²OP) production workflow

1 · Chip integration

The chip and antenna are embedded in a flexible substrate and covered with adhesive film.

2 · Lamination

Several layers are pressed with heat into one thin patch.

3 · Application

Iron, hair straightener or sticker attaches it to clothing, gear and bags.

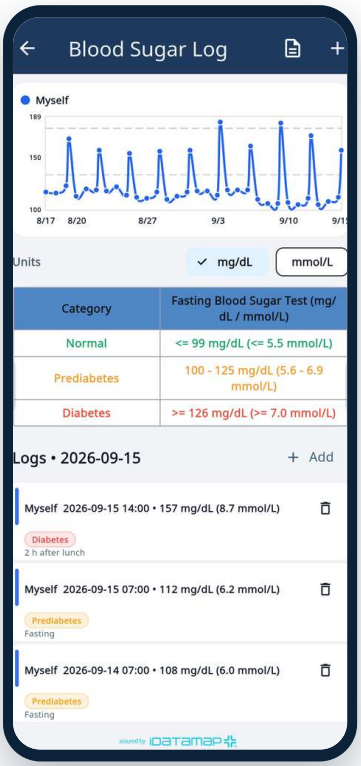

4 · Distribution

Only genuine, certified patches can be written by the apps. Supplied to partners worldwide.

05 · HEALTH MANAGEMENT IN THE APP

Numbers kept as records. Trends shown as graphs.

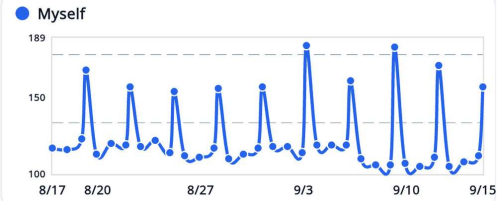

Blood sugar, blood pressure, medication, supplements and vaccinations. Log them by date and the app builds the calendar and a 30-day trend graph, ready to export as a PDF. No patch and no account needed to start today.

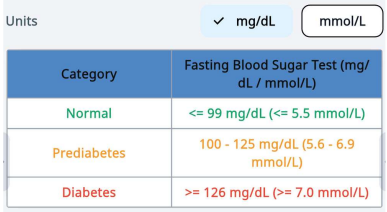

01

Blood sugar: a 30-day trend in both units

Each fasting or after-meal reading lands straight on the 30-day trend graph. Enter it once and mg/dL and mmol/L appear together, with the fasting reference table (normal, prediabetes, diabetes) on the same screen.

30-day trend graph

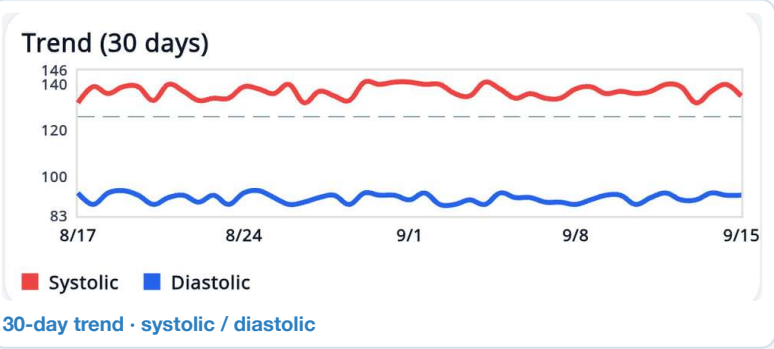

mg/dL ↔ mmol/L · fasting reference table

mg/dL ↔ mmol/L together · Fasting · 2 h after a meal · Calendar · PDF export

02

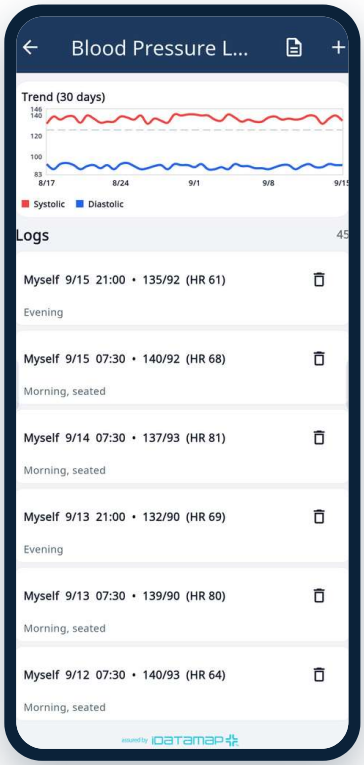

Blood pressure and heart rate at a glance

Systolic and diastolic pressure draw side by side as a 30-day trend. Every entry keeps the heart rate (HR) and a note such as "morning, seated" or "evening", so you know how each reading was taken.

30-day trend · systolic / diastolic

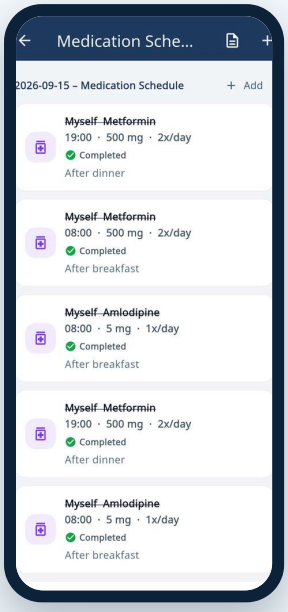

Systolic · diastolic 30-day trend · Heart rate on every entry · Notes on how it was measured

Real WaveMed app screens (demo data).

05 · HEALTH MANAGEMENT IN THE APP · 2

Medication, supplements, vaccines, and one dashboard.

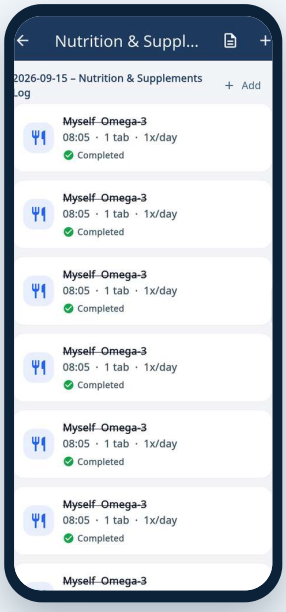

03

Medication schedule: taken, and recorded

Name, dose, time and times per day become a dated schedule. Each dose is marked Completed as it is taken, so a missed one stands out, with reminders and calendar sync.

- **Completed marks**
- **Reminders · calendar**

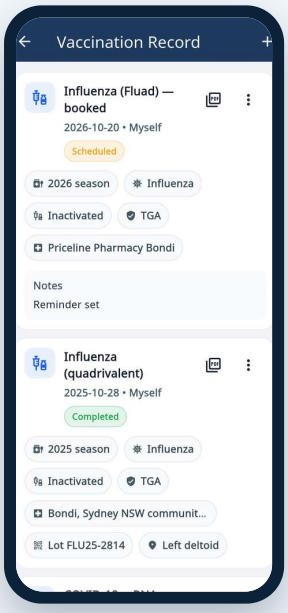

04

Nutrition & supplements: what, and how much

Product, dose, time of day and times per day, logged by date, with a 30-day trend and a PDF. Supplements and prescriptions can be seen as one list.

- **Logged by date**
- **30-day trend · PDF**

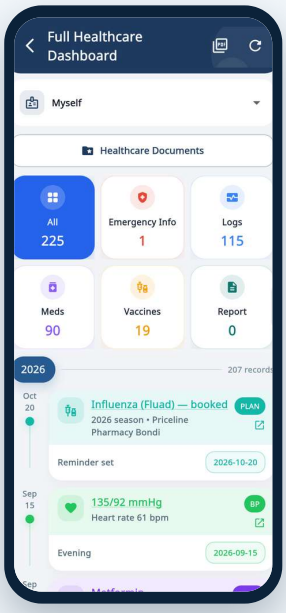

05

Vaccination record, for the day proof is needed

Vaccine, date, dose, type, where it was given, lot number and injection site are kept as one card, and each record exports as a PDF.

- **Lot number · site**
- **PDF per record**

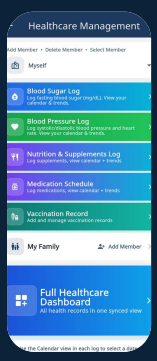

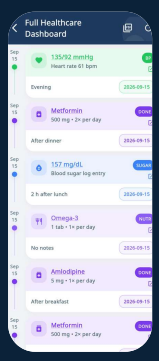

06

Full Healthcare Dashboard

Blood sugar, blood pressure, medication, supplements, vaccines and emergency info join one dated timeline. Counts by type sit up front, Healthcare Documents is one tap away, and the view exports as a PDF.

- **One timeline**
- **Healthcare Documents · PDF**

WAVEMED

One family member at a time

On the Healthcare Management home screen, select yourself or a family member and keep each person's records apart.

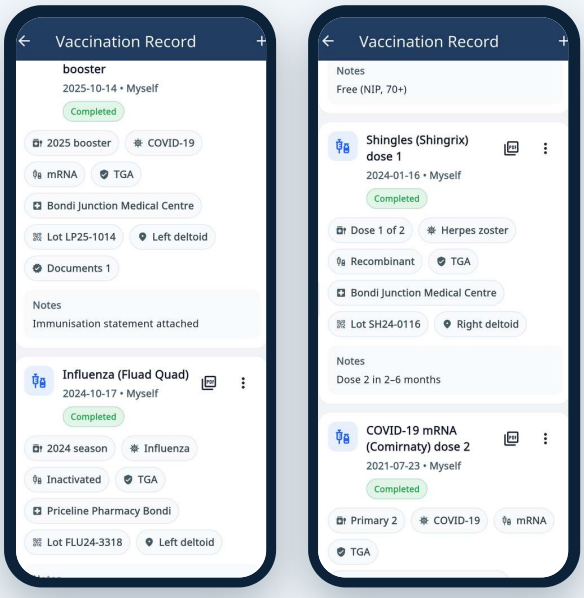

Real WaveMed app screens (demo data).

05 · VACCINATION CERTIFICATES AND DOCUMENTS

Certificates attached to the record. Papers filed by folder.

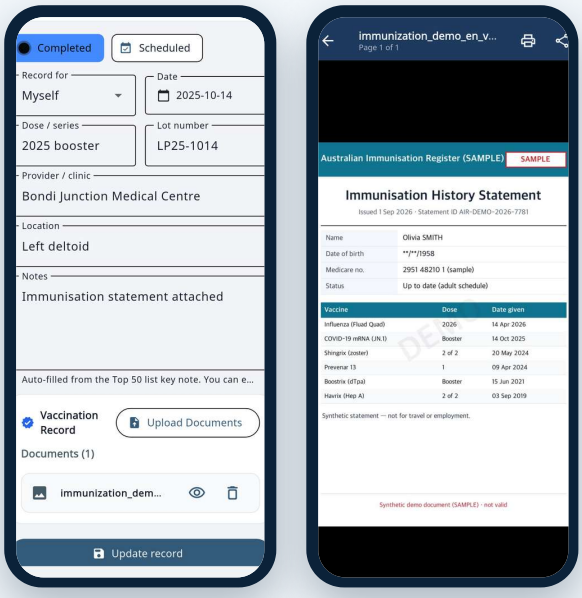

Vaccination history, travel vaccines included

Influenza, shingles, COVID-19, Tdap, hepatitis A and travel vaccines such as typhoid build up as dated cards, each with dose, vaccine type, where it was given, lot number, injection site and a note.

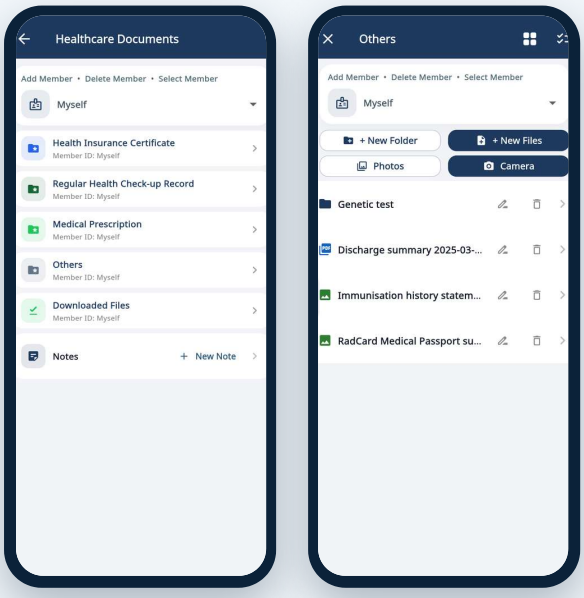

Attach the certificate to the record

Upload the vaccination certificate as a document on each record. Choose the vaccine and the disease, vaccine type and authority fill in; the attached certificate opens inside the app, ready to print.

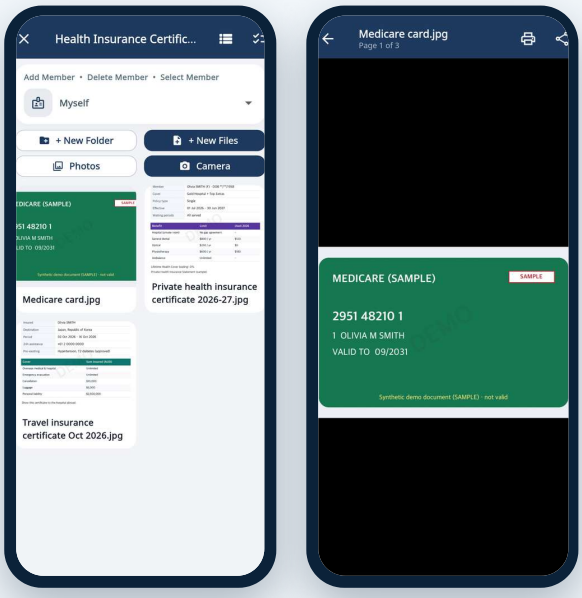

Healthcare documents, filed by folder

Insurance certificates, check-up records, prescription lists, other papers and downloaded files each have a folder, for every family member. Add a new folder or file, a photo, or use the camera.

Insurance certificates, open when needed

Health insurance eligibility statements and private medical or travel insurance certificates show as thumbnails, and open full-screen to show or print.

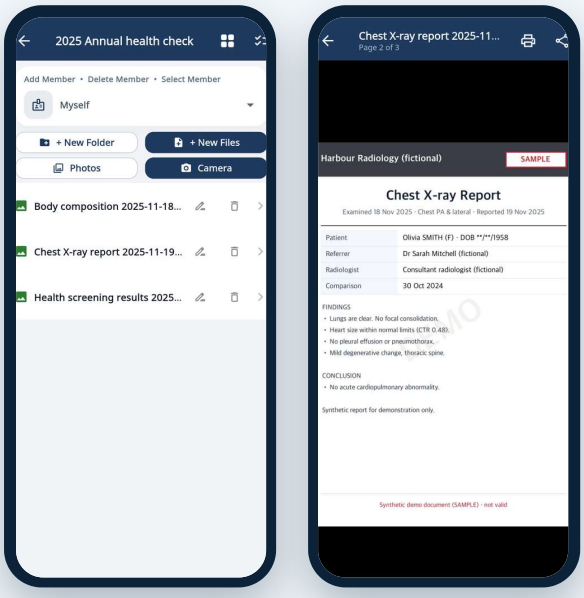

Real WaveMed app screens (demo data).

05 · CHECK-UPS, PRESCRIPTIONS AND LANGUAGES

Paper kept as photos. Emergency info and medicines in their language.

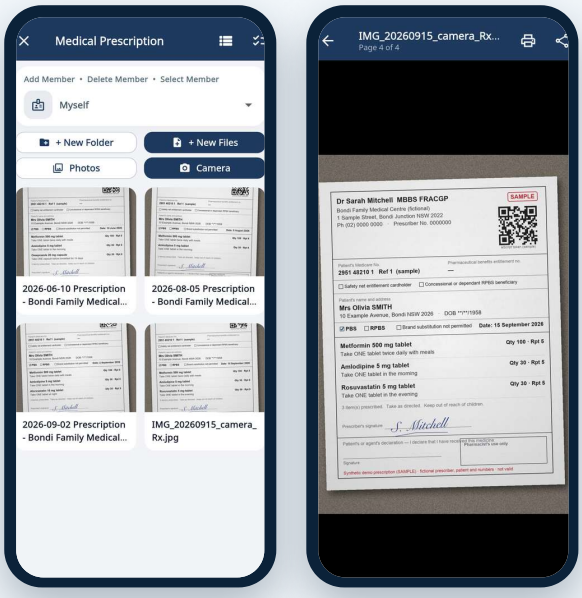

Check-up records, one folder a year

Make a folder for each year's national health screening and keep the results letter, chest X-ray report and blood test results inside. Browse them as thumbnails and open any one to read.

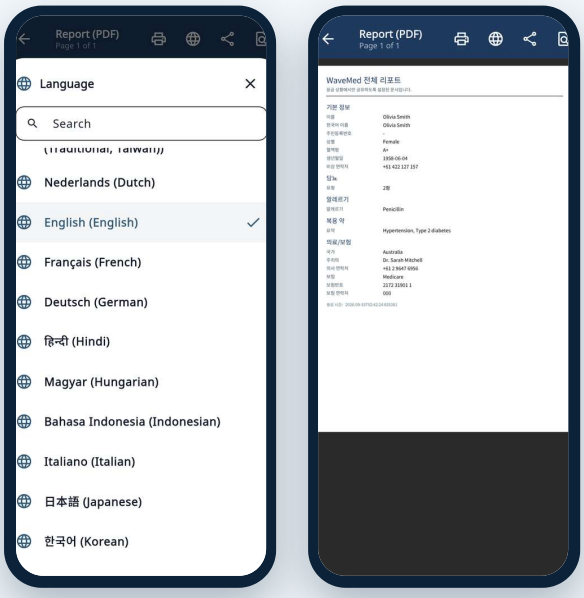

Upload a prescription with the camera

Tap Camera in the prescription list and photograph the paper prescription; it goes straight into that person's folder as a dated file. No more loose papers from every pharmacy.

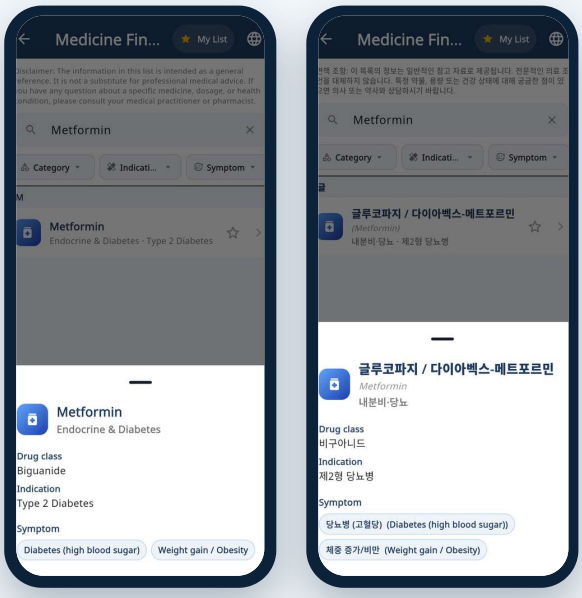

Emergency report: pick a language, on the spot

Choose a language on the report screen and the same emergency information is rebuilt in it, in 26 languages. Headings and items chosen from a list change to that language; notes you typed stay as you wrote them.

Medicine Finder: your medicine in the local language

Search by name and the brand names appear with the English INN, drug class and indication. Switch the language on the screen and the same medicine changes to that language: 1,000 medicines, 26 languages.

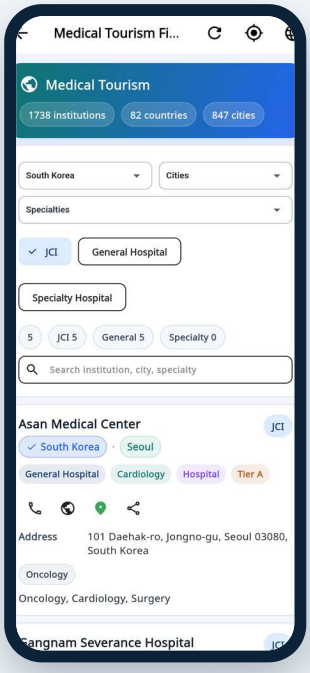

Real WaveMed app screens (demo data).

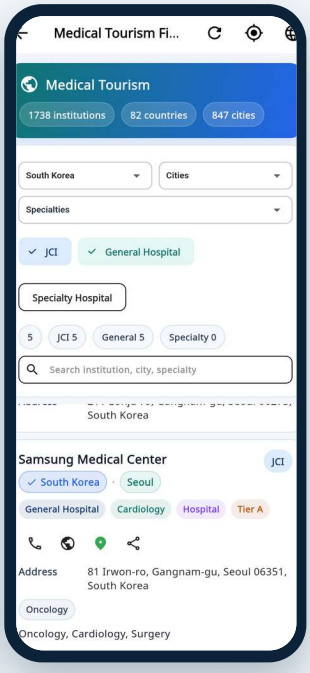

05 · ABROAD, AND WHEN IT IS URGENT

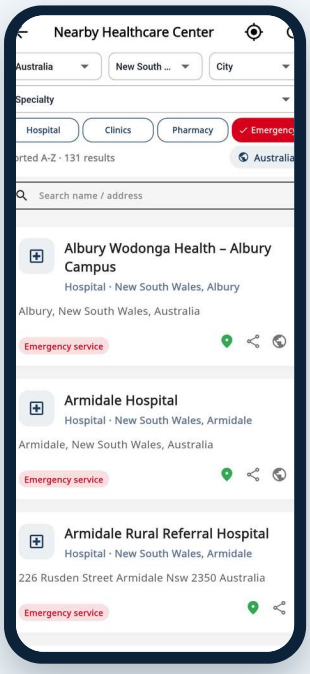

Hospitals and the way there, even somewhere new.

Medical tourism: 1,738 facilities in 82 countries

Search hospitals abroad by country, city and specialty, and narrow the list to JCI-accredited, general or specialist hospitals. Each one shows its address, phone, website and map location.

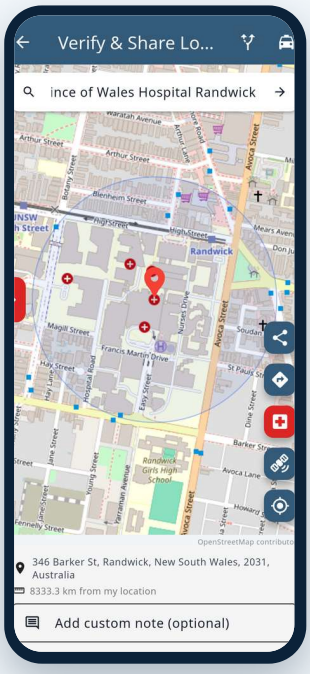

Nearby medical centres: find an emergency room

Choose country, city and specialty, filter by hospital, clinic, pharmacy or emergency centre, and hospitals that run an emergency room are marked. Search by name or address and open the map location in one tap.

Verify & share location, on one map

Search a place and the map shows the pin and the hospitals around it, with the address and the distance from where you are. Share, directions and ride buttons sit on the map, and you can add a note before sending.

Real WaveMed app screens (demo data).

GALLERY

Where it goes — anywhere

Watch straps, collars, bags, helmets, shoes, phone cases, pet collars. Attach it once and the same information is read anywhere.

Where it is read

Pilgrimage, mountains, aircraft, hospitals, industrial sites, disaster zones. Shown in the reader's language.

06 · GETTING STARTED

Five minutes today and you are ready.

1
Install the app
Scan the QR code and get WaveMed from Google Play / App Store. It is free and needs no account.

2
Enter your details and write the patch
Name, date of birth, blood type and an emergency contact; add allergies and medication as needed. Hold the phone to the patch to save. A four-digit PIN appears. Write it down.

3
Attach it and forget it
Put it where you always carry it. When your medication changes, read the patch, enter the PIN and update. Nothing else to do.

Security	Encrypted · 4-digit PIN · only genuine patches can be written
Languages	26, shown automatically
Apps	WaveMed (owner) · vWaveMed (paramedics, responders, fire crews) · free

Frequently asked questions

Q. Is it really fine with sweat and washing?
A silicone body and a sealed chip give two layers of waterproofing. The washing machine, sea water and the sauna are all fine.

Q. Which phones can read it?
Any current smartphone. Most Android phones on 8.0 or newer, and recent iPhones.

Q. Can strangers read my private information?
The patch holds only what you chose to show in an emergency. Changing or erasing it needs the PIN, and apps other than the WaveMed family cannot open it.

WORKING TOGETHER

Working with clubs

1. Club-logo bands or helmet stickers from a minimum quantity.
2. One group registration session; three app steps and each member is done.
3. Members learn to read each other's patches (vWaveMed) for events and away trips.

Even without a patch, the app alone gives you

Your health log
Blood pressure, blood sugar, medication and supplements by date, with a 30-day trend.

Document folder
Check-up results, prescriptions and vaccination certificates as photos or PDFs, ready when asked.

Family records
Separate records for your children and parents, printed as a one-page report.

Fastest nearby hospital and pharmacy search
Every hospital and pharmacy around you, nearest first, with the country's emergency number.

Local transport in every country
Uber, Kakao T, Bolt, Grab and the other ride services of that country, one tap to the hospital.

iDataMap Corporation Pty Ltd · Radcard Korea Co., Ltd.
